TITLE: Coulometric determination of monomers with control of polymer production

SOURCE: Zavodskaya laboratoriya, v. 30, no. 3, 1964, 278-281

TOPIC TAGS: coulometric titration, potentiometer PPTV 1, potentiometer R 307, milliammeter M82, microammeter M194, battery ZSL 30, polymer, monomer, bromine, styrene, acetate

ABSTRACT: The authors have investigated the possible use of the coulometric method for quantitative determination of content of vinyl acetate, styrene, α -methyl styrene, and total styrene plus α -methyl styrene at various stages in the technological process of polymer and copolymer production and at the final stage of prepared polymer material. They have investigated in detail the conditions for producing bromine from a 0.1-normal solution of KBr in 0.3-normal HCl in the presence of alcohol or of alcohol plus benzene to determine ≥ 0.03 mg of monomer that has not participated in the polymerization reaction. They describe an apparatus for coulometric titration and provide an equation to determine the monomer content. The relative error is about 5.5%, and the determination takes

TITLE: Linear interpolator in a digital programmed control system

SOURCE: AN GruzSSR. Institut elektroniki, avtomatiki i telemekhaniki. Trudy*, v. 4, 1963, 121-127

TOPIC TAGS: automatic control system, automatic machine, cutting tool, metalworking machine, servomechanism system

ABSTRACT: The programmed control system in question was designed at the Institut elektroniki, avtomatiki i telemekhaniki AN GruzSSR for metal cutting machinery and is claimed to incorporate many original approaches, both with respect to the block diagram and the circuitry and elements employed. The linear interpolator described is made an integral part of the entire control system so as to reduce to a minimum the necessary information conversion and to eliminate the

Cord 1/4

ACCESSION NR: AT4040445

unreliable reversible counter (comparison unit). The function of the latter is assumed by the interpolator itself, the operation of which is synchronized with the actuating unit. A signal initiating the next step of the cutting tool is produced by the interpolator only after the feedback signal indicating correct performance of the preceding step is received from the actuating mechanism. The operation of the interpolator as a computer unit, as a control unit, and as a servomechanism is described. The frequency divider, shift register, and digital gates of the interpolator were described elsewhere (the authors with A. G. Lekvinadze and V. V. Imedadze, Sistema tsifrovogo programmnego upravleniya metallorezhushchimi stankami, VINITI, Moscow, 1961.) The authors claim that the incorporation of the interpolator into the control system made it possible to simplify the system appreciably and at the same time increase operating reliability and flexibility. The use of ferrite-transistor elements increases the noise immunity and makes the system more compact. Most of the ferrite-transistor elements are of original design and were described

Cord 2/4

ACCESSION NR: AT4040445

elsewhere (V. V. Imedadze and I. P. Pavlodze, Trudy Instituta elektroniki, avtomatiki i telemekhaniki AN GruzSSR, v. 1, 1960). The main premises underlying the calculation of the interpolator parameters are briefly stated. Orig. art. has: 5 figures.

On the Nature of Viscous Destruction of Metals. V. A. Paylov. (Doklady Akademii Nauk S.S.R.R., 1963, Vol. 153, No. 200, National Bureau Translation No. 100, Oct., 1963). Changes in the proportion of metal undergoing plastic deformation were studied on steel specimens by determining the relation between the impact strength and the magnitude of the preliminary plastic tensile deformation. Experimental results lead to the conclusion that this dependence reflects the effect of plastic deformation, not on brittleness, but on viscous destruction. It is proposed that the instant that cracking commences be taken as the beginning of viscous destruction.

TITLE:

Effect of Lubricants and Anti-wear Additives Upon the
Abrasion Wear of Metals in Sliding Friction

PERIODICAL:

Izvestiya vysshikh uchebnykh zavedeniy. Neft' i gaz. 1960,
No. 2, pp. 73-79

TEXT: The authors wanted to clarify the effect of lubricants and anti-wear agents upon the abrasion wear of metals in sliding friction. Tests were conducted on a four-ball friction machine (Ref. 6) with balls 12.7 mm in diameter made of $\text{W}\times 6$ (ShKh6) steel and X18 (Kh18) stainless steel. The steel hardness was 832 kg/mm² and 657 kg/mm², respectively. The rubbing speed was 21 cm/sec. $\text{W}\times 6$ (ShKh6) steel balls 9.52 mm in diameter were tested with V. P. Pavlov's sliding machine (Ref. 7). The sliding rate in this case amounted to 41.5 cm/sec. The tests were conducted at room temperature by the "one-minute" method. The balls were first subjected to stress, and the machine was then started. The abrasive agents used were electrocorundum micropowders M7(M7), M10(M10), M14(M14), and M28 (M28).

Card 1/3

and boron carbide micropowders M₃(M3), M₅(M5), and M₇(M7), produced at the Petergofskiy chasovoy zavod (Petergof Watch Factory). The size of the micropowder particles conformed with NOCT 3258-46 (GOST 3258-46), and in the case of electrocorundum particles it was correspondingly 7-5, 10-7, 14-10, and 28-20 μ . The boron carbide particles were correspondingly 3-5, 5-3, 7-5 μ large. The mentioned micropowders contained 60-70% main fraction. Mica or silica gel of at most 14 μ were introduced in some of the tests. The micropowders were all added to the lubricants while stirring. The lubricants used were mixtures of plastic lubricants with oils of medium viscosity or with naphthene-paraffin fractions. AY (AU) and MG-14 (MS-14) oils were used as the liquid hydrocarbon media. Dibenzyl sulfide as an anti-wear substance was added to the mixtures in an amount of 2.46 percent by weight. The results obtained by the authors from their tests are in agreement with observed wear resistance of the sulfidized rubbing surface in the presence of abrasives (Ref. 7). It may be seen from Fig. 4 that in all cases the introduction of dibenzyl sulfide reduces friction in the gripping period. The authors were able to establish that the specific effect of the abrasive in the lubricants is to a large extent dependent

Experimental investigation of the distribution function of poly-

mer by molecular weights. C. E. Bresler, V. V. Korshak, S. A.

Lechnowicz, and P. A. Filogenov (C.R. Acad. Sci. U.R.S.S., 1952, 87,

no. 1). A new formula for the distribution function, $P_x = \frac{1}{(2\pi)^{1/2}} \exp(-(\bar{x} - x)/2x)$, is evolved; P_x is the wt. fraction of the x -mers and \bar{x} and x are polymerisation coeff. and average polymerisation coeff., respectively. Experimental data for the mol.-wt. distribution of polymers are obtained by the ultracentrifuge sedimentation method applied to all fractions of an polyamide dispersed in methanol. The experiments confirm the assumption of interaction and regrouping between polymer chains of different length, implicit in the evolved formula. S. K. LECHNOWICZ.

Rapid determination of carbon content in steels. P. A. Haythorpe and Burton R. Payne, Jr. *Am. Machinist* 92, No. 24, 123-126 (1948).—The method is based on quenching a small piece of the steel into Hg, brine, or oil brine from a temp. 200-300°F. higher than the usual quenching temp., to insure complete soln. of carbides. After grinding to produce parallel surfaces free of decarburization, the Rockwell hardness is determined, and the C content read from a chart of C content vs. max. hardness. James W. Poynter

Q40. The position and movement on the solar disk
of sources of radiation at a wavelength of about
3 meters. R. PANDHARIPAD, AND A. G. LITVIN.
Summary in U.R.S.I. Proc. XVth Gen. Assembly, 8
290-1 (Pt II, 1960).

Short summary of results of instantaneous measure-
ments of the apparent position on the solar disk,
and polarization, of sources of solar radiation at
97 Mc/s. It is suggested that the radio source is
located high in the corona above the associated sun-
spot group. The former appears to travel faster than

the latter. The same is true for radio bursts associated
with flares. G. M. BROWN

Title : Ferroelectric Inhomogeneous System with Temperature-Stable
Dielectric Constants

Orig Pub : Byul. Pol'skoy AN, 1956, Otd. 3, 4, No 2, 79-82

Abstract : Description of a method for the manufacture of inhomogeneous systems, consisting of solid solutions of metatitanates of barium and strontium for the purpose of obtaining ferroelectric materials with temperature-stable dielectric constant (ϵ) (low temperature coefficient of ϵ). The recipe for the preparation of the mixture is described, the mean value of the temperature coefficient of ϵ is given and is shown to be approximately 14 times smaller than the corresponding mean values for the initial solutions in the temperature range from 15 to 65°. The mean values of ϵ in the same temperature interval are 1335, 1380, and 1890 respectively for the initial solutions in the mixture. After 1.5 years of aging, ϵ diminished to approximately 80% of the

TITLE: Electric contact level gage for measuring the position of the level of conducting corrosive liquids in tanks without excess pressure

SOURCE: Neftepererabotka i neftekhimiya, no. 11, 1963, 32-33

TOPIC TAGS: liquid level indicator, petroleum refinery equipment, ELECTRIC MEASURING INSTRUMENT, STORAGE TANK

ABSTRACT: To measure the level of a corrosive reagent in a tank, L. G. Pays, A. G. Grasyuk, and N. V. Maslennikov, on the staff of the automation section of the KIP NUNPZ, proposed and constructed a special automatic level gage. A distinctive feature of the design is the fact that the probe which comes in contact with the liquid does so only during measurements, and remains out of contact with the liquid or its vapor during intervals between measurements. The instant when the probe reaches the level of the liquid and the rise of the latter above the allowed level are determined by using the liquid itself as the conductor which closes the electric circuit of the apparatus.

Title : Efficiency of Various Catalysts at Alkylation of Benzene
by Propylene.

Orig Pub : Izv. AN SSSR, Otd. khim. n., 1956, No 8, 1006-1015

Abstract : The efficiency of the catalysts $H_3PO_4 \cdot BF_3$ (I), 88.7%
 $H_3PO_4 \cdot BF_3$ (II), $AlCl_3$ (III), $AlCl_2 \cdot HSO_4$ (IV), $H_2O \cdot BF_3$
(V) and H_2SO_4 (VI) at alkylation of benzene by propylene
in liquid state at 20 to 80° was studied. The most effi-
cient (in respect to catalyst consumption) proved to be
I, II and III. The greatest concentrations of isopropyl-
benzene are achieved in presence of $AlCl_3$ and catalysts
of the BF_3 base. Nearly the same amounts of isopropyl-
benzene are produced in presence of I at a lesser molar
ratio of $C_6H_6 : C_3H_6$ than in presence of VI, III and IV.

AUTHORS: Klokman, V. R.; Payusov, A. P.

TITLE: A study of the effect of the nature of the solvent and size of the radius of the cation of the microcomponent, on the crystallization coefficient value

PERIODICAL: Radiokhimiya, v. 2, no. 5, 1960, 521 - 530

TEXT: A comparison was made of the crystallization coefficients of SrCl_2 and RaCl_2 in their distribution between the melt and crystals of PbCl_2 in the same binary systems which showed that the crystallization coefficient (CC) of SrCl_2 is much higher than that of RaCl_2 . The assumption made by the authors in Ref. 1 (V.R. Klokman, G. I. Avdulov, Radiokhimiya, 2, 4, 393, 1960), that all other conditions being equal, the absolute value of CC depends on the ratio of the radii of the cations of the micro- and macro-components, was confirmed in other systems, namely in the systems with BaCl_2 , with which the SrCl_2 and RaCl_2 cocrystallize isomorphically, the

Card 1/16

same as with $PbCl_2$. A study was also made of the effect of the nature of the solvent on the value of the CC of the microcomponent. The subjects of the experimental investigations were binary systems, formed by chlorides of alkaline metals Li, Na, K, Cs and barium chloride. $SrCl_2$, labelled with Sr^{90} , was used as the microcomponent. The measurements of the Sr^{90} were carried out from the accumulation of its allied product Y^{90} , first separated from the Sr^{90} . Phase diagrams were made of the corresponding systems prior to the experiments on CC determination (Figure 1). Data showed that in the system $BaCl_2$ - $CsCl$ the formation of four compounds takes place, which melts incongruently. The determination of the $SrCl_2$ CC was carried out according to the method described by the author in Ref. 3 (V. R. Klokman, A. A. Mel'nikova, Radiokhimiya, 1, 5, 514, 1959). The Sr^{90} content was calculated from the accumulation formula of the allied product of decay. The results of the CC determination of the strontium chloride in the system $BaCl_2$ - $LiCl$ are given in tables 2 and 3. The results of the $SrCl_2$ CC determination for

Card 2/16

A study of the effect of the nature of ...

the system $\text{BaCl}_2\text{-NaCl}$, at a temperature of 715°C are given in Table 4. The SrCl_2 CC determination in the system $\text{BaCl}_2\text{-KCl}$ was made at three different temperatures, shown in Tables 5-7. Finally, Table 8 gives the results of the determination made for the system $\text{BaCl}_2\text{-CsCl}$. The authors point out that the data obtained showed that the CC of SrCl_2 in its distribution between the melt and crystals of BaCl_2 in all the investigated systems remains a constant value with a change in the amount of the solid phase, temperature and melt composition. It was further shown that the absolute value of the SrCl_2 CC in the system KCl, is twice as low as its value in the system with LiCl and with NaCl. With a shift over to the system with CsCl a further drop is noted of the CC value of the SrCl_2 . The drop in the CC of the SrCl_2 is explained by the formation in the melt of more stable complex ions of the microcomponent as compared to the complex ions of the macrocomponents. The SrCl_2 and BaCl_2 form simple eutectic systems with the Li and Na chlorides, in which, in the case of the absence

Card 3/16 X

S/186/60/002/005/002/017

A051/A130

A study of the effect of the nature of

of a complex-forming agent in the liquid phase, the state of the micro- and macro-component should not change with a replacement of the solvent. A study of the distribution of the microcomponent between the solution and isomorphic solid phase, showed that a lowering of the ion activity of the macrocomponent as a result of the formation of the complex compound, causes a drop in the CC, and a drop of the ion activity of the microcomponent leads to an increase of it, (Ref. 8: V. G. Khlopin, Izbr. tr., 1, 196, Izd. AN SSSR, M-L, 1957). Thus, a comparison of the CC values of the SrCl_2 and RaCl_2 in the same systems showed that the absolute value of the CC of the microcomponent is that much greater the closer the ion radii of the micro- and macro-components are (Table 9). The authors point out that if it is assumed that the state of the micro- and macro-components does not change in the melt with a shift over to the system with KCl, then one can conclude that the compound $\text{BaCl}_2 \cdot 2\text{KCl}$ is completely disassociated in the melt. The process of distribution is said to be characterized by two constants: the CC (D) and distribution constant K. The latter two were investigated and K was calculated in the systems $\text{BaCl}_2\text{-SrCl}_2\text{-KCl}$ and $\text{BaCl}_2\text{-SrCl}_2\text{-LiCl}$, where it was shown that the value of K, just as in

Card 4/16

20047

S/186/60/002/005/002/017
A051/A130

A study of the effect of the nature of ...

solutions, decreases with an increase of the content of the macrocomponent in the liquid phase, whereas, D, the CC, remains a constant value. The calculations made for determining the value of K for the given system was based on formulae derived in previous works, (Ref. 12: W. Klemm, W. Tilke, S. V. Mullenheim, Z. an. allg. Chem., 176, 1:3, 1, 1928; Ref. 11: I. S. Peake, M. R. Bothwell, J. Am. Chem. Soc., 76, 10, 2653, 1954). The densities of the melts and the volume of the solid phase were estimated, leading to the determination of the liquid and solid phase volumes and K, as the ratio of the volumetric concentrations of the microcomponent in the solid and liquid phase. (Table 10). One of the authors was able to show that K can be calculated for any system when working in the melts, if the concentration of the microcomponent in the liquid and solid phases is expressed in molar parts (Ref. 13: A.I. Belyaev, Fizicheskaya Khimiya rasplavlenykh soley. Metallurgizdat., M., 1957).

Then $K = \frac{D}{N}$, where N is the molar part of the macrocomponent in the liquid phase (Table 11). In conclusion the author stresses the fact that the phase diagram of the system $\text{BaCl}_2\text{-CsCl}$ was plotted for the first time. There are 11 tables, 1 graph (phase diagram) and

Title : Coniferous Species, Introduced in Western Estonia and
the Possibilities of Their Utilization.

Orig Pub : Izv. AN EstSSR, Ser. biol. 1957, 6, No 3, 281-291.

Abstract : Fifty three species of exotic coniferous species were
registered as a result of inventory of dendroflora in the
Western Part of the Estonian SSR during the years 1954 -
1956.
Bio-ecological peculiarities of the exotic species are
briefly described and the possibilities of their further
utilization in cultivation are discussed.
A table with the list of coniferous species which were
registered is added to this study.

Nestakov, A. A., and Palvin, A. U. On the asymptotic behavior of solutions of nonlinear systems of differential equations. Doklady Akad. Nauk SSSR [N.S.] 62, 405-408 (1948). (Russian)

The asymptotic behavior as $t \rightarrow \infty$ of the stable solutions of the system

$$\frac{dx_i}{dt} = \sum_{k=1}^n a_{ik}x_k + \varphi_i(x_1, x_2, \dots, x_n, t), \quad i = 1, 2, \dots, n$$

(a_{ii} constant, $\varphi_i(0, 0, \dots, 0, t) = 0$), has been studied by O. Perron [Math. Z. 29, 129-160 (1928)] and by I. G. Petrovsky [Rec. Math. [Mat. Sbornik] (1) 41, 107-155 (1934)]. In the present note some of those results are stated under weaker hypotheses. Not all of the proofs are given.

TITLE: Ground Observation of Airplanes (Nablyudenije za samoletami)

PERIODICAL: Kryl'ya rodiny, 1957, Nr 12, p 18 (USSR)

ABSTRACT: The authors state that the need to forestall accidents in the air and in landing called for more effective observation of student pilots from the ground and led to the installation of an "observation panel" at the Novosibirsk aeroclub. There are 2 drawings.

ASSOCIATION: Novosibirskiy aeroklub (Novosibirsk Aeroclub)

AVAILABLE: Library of Congress
